

## Precision Concepts was the first in the world to coat Metered Dose Inhaler cans. Precision Concepts has coated over 300 million cans in the last 20+ years.

Precision Concepts understands the importance of pharmaceutical and healthcare products meeting the highest quality standards. Precision Concepts was the first in the world to coat metered dose inhaler cans, and we have coated over 300 million cans in the last 20+ years. MDI cans are used for respiratory drug delivery for chronic lung diseases such as COPD or Asthma. They are also now being used for newer treatments such as CBD oil or Cannabis delivery into the body via the lungs.

We apply a coating to the inner surface of the can, which is then cured. This coating prevents the adherence of active ingredients to the can. These coatings have superior release properties and provide excellent moisture and chemical barrier properties to ensure your product is delivered with the safest quality, providing a low extractables and leachables profile. These benefits lead to improved dose reproducibility, shorter development programs and exceptional formulation performance, creating a solution that matters to your patients.

### MANUFACTURING CAPABILITIES

State-of-the-art coating machines	GMP facility
Wide range of customizable can sizes	Drug Master File (DMF)
Manufactured in a controlled environment	ISO:9001 Certification

### AVAILABLE COATINGS

- \*NEW\* 100% Fluoropolymer Free Coating**
- Fluorinated Ethylene Propylene (FEP)
- Polytetrafluoroethylene (PTFE)
- Water based products in development
